

4D TRADER

System Manual

Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

Investing.com ★★★★★

ENTRY EXAMPLE

System signals are pretty straightforward. We recommend to pick the signals only in line with trend force dashboard.

It shows the market force on three different timeframes (each mode provides different set of timeframes).

Example:

BUY SIGNAL – should be taken when trend force shows UP trend on all 3 x TF's.

Sell signals works pretty much the same way. **SELL SIGNAL** - should be taken when trend force shows DOWN trend on all 3 x TF's.

NOTE: Trend force dashboard provides analysis of 3 x Timeframes. The most important in order are: Slow / Mid / Fast.

Scalping and daytrading signals are also correct with confirmation of the 'Slow' and 'Mid' only ('Fast' gives briefly information about the possible pullback).

STOP LOSS and TAKE PROFIT

Stop loss should be placed:

- Below the last swing low for BUY trades
- Above the last swing high for SELL trades

Take profit should be placed:

- R:R=2:1 when market is moving dynamically
- R:R=1:1 when market slows down or consolidates

TRADE MANAGER

The software contains also easy-to-use trading manager.

It has 3 x major sections:

Execution

This is the main part, when we can open and close the trades. To open a trade, press BUY or SELL button, and click 'send order'. You can easily move SL and TP lines. This section allows also for changing the risk settings, break even and partial close features and closing the trades (in profit/all/losing one).

Management

This tab provides trailing stop feature (it's disabled by default). You can set: Start, Trailing and Step the trailing will be used.

Equity

The last section provides daily/weekly equity drawdown alert. You can pick at what amount or percentage of the account the manager will alert you about the drawdown.
